

What can be Offered/Provided to our Regional Pathology Centers if there is a Full Autopsy planned.

- Vitreous

- Detailed photography; partial restriction in involving areas of concern; *consider location of injuries and size of donor when attempting to work through restrictions*

- Consider partial restriction vs full restriction; detailed photography during recovery; documentation of bleeding and photos of ante-mortem injuries. No hemi-pelvis for OCME.

- Clot collection and detailed photography

- Detailed photography

- Detailed photography; clot collection and documentaion of where they were found; Jesse Edwards Path report, slides, and myocardial return once processing is complete.

- On full autopsy cases or cases where autopsy is uncertain HonorBridge does not recover AI.
